DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

None of the prior art of record is seen to disclose or suggest the limitation of claim 33 that a tube shaped and sized to contain biological specimens and to slide into the sleeve and provided with a system that interlocks the sleeve on the tube in first and second positions; wherein, after interlocking in the first position, the sleeve is irreversibly integrated to the tube and biological specimens can be inserted in the tube, and, after interlocking in the second position, accessing the biological specimens causes an irreversible and visible physical transformation of the sleeve, but not of the plug. For example, the closest reference found, Marino, teaches a tamper-resistant closure but does not teach a tube shaped and sized to contain biological specimens and to slide into the sleeve and provided with a system that interlocks the sleeve on the tube in first and second positions; wherein, after interlocking in the first position, the sleeve is irreversibly integrated to the tube and biological specimens can be inserted in the tube, and, after interlocking in the second position, accessing the biological specimens causes an irreversible and visible physical transformation of the sleeve, but not of the plug.

None of the prior art of record is seen to disclose or suggest the limitation of claim 34 that a tube shaped and sized to receive the biological specimens; a sleeve provided with at least one breakable catch; wherein the tube comprises: a first catch that integrates the sleeve to the tube in an irreversible manner; and a second catch

such that, after interlocking of the second catch, subsequent opening of the tube causes irreversible and visible breakage of the breakable catch. For example, the closest reference found, Marino, teaches a tamper-resistant closure but does not teach a tube shaped and sized to receive the biological specimens; a sleeve provided with at least one breakable catch; wherein the tube comprises: a first catch that integrates the sleeve to the tube in an irreversible manner; and a second catch such that, after interlocking of the second catch, subsequent opening of the tube causes irreversible and visible breakage of the breakable catch.

None of the prior art of record is seen to disclose or suggest the limitation of claim 35 that a tube shaped and sized for receiving the biological specimens; a sleeve comprising an interlocking system that interlocks the sleeve on the tube at first and second positions and an individual breakable clamp for each of the two positions, the rupture of which is irreversible and visible; wherein interlocking the sleeve at the first position irreversibly integrates the sleeve with the tube and removal of the plug irreversibly breaks the first clamp, allowing free movement of the plug, and wherein interlocking at the second position requires an irreversible and visible breakage of the second clamp for plug removal. For example, the closest reference found, Marino, teaches a tamper-resistant closure but does not teach a tube shaped and sized for receiving the biological specimens; a sleeve comprising an interlocking system that interlocks the sleeve on the tube at first and second positions and an individual breakable clamp for each of the two positions, the rupture of which is irreversible and visible; wherein interlocking the sleeve at the first position irreversibly integrates the

sleeve with the tube and removal of the plug irreversibly breaks the first clamp, allowing free movement of the plug, and wherein interlocking at the second position requires an irreversible and visible breakage of the second clamp for plug removal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
